

# Leece-Neville

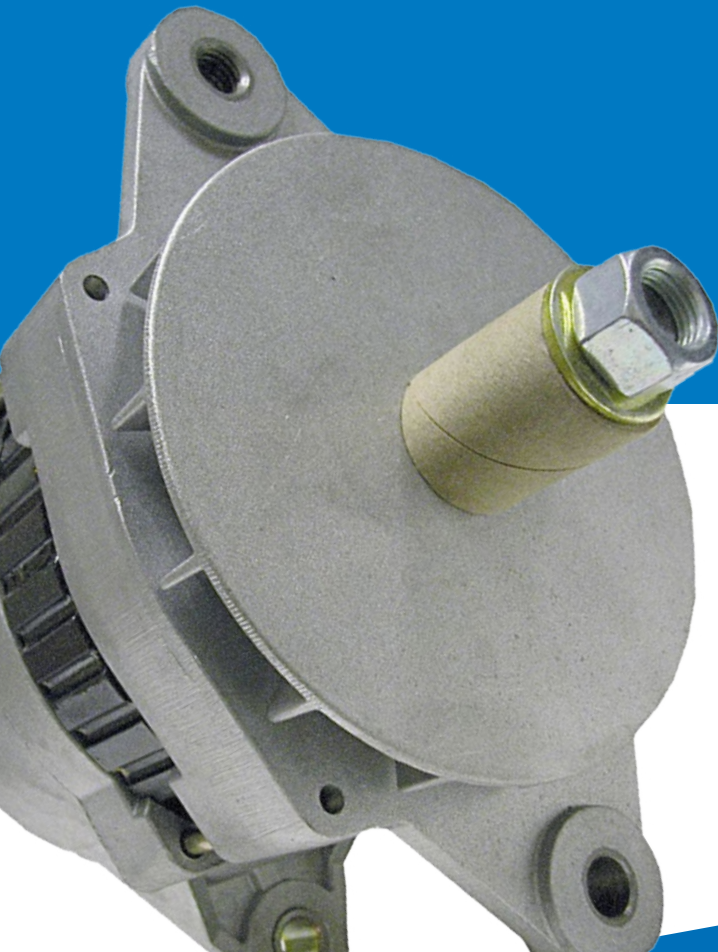

H E A V Y   D U T Y   S Y S T E M S

Leece-Neville provides a range of heavy duty, high output alternators that are ideally suited for the high demands on today's vessels.

These high performance alternators have a large frame design that allows superior heat dissipation and thus provides for better alternator longevity in even the harshest conditions.

Low cut in speeds are also a feature on these alternators making alternator charging output achievable at idle revs.

To maximise the performance your high performance Leece-Neville alternator we recommend using the Ample Power range of alternator regulators.

## Benefits:

- High Performance
- Superior heat dissipation
- Low cut in speed
- Proved in the harshest environments
- Ideal when used with Smart Alternator Regulator

	12/130	12/160	24/175
<b>System Voltage</b>	12V	12V	24V
<b>Output</b>	130A	160A	175A
<b>Mounting Style</b>	Spool	J-180	J-180
<b>Rotation</b>	Clockwise	Clockwise	Clockwise
